

# Part One. Python Basics

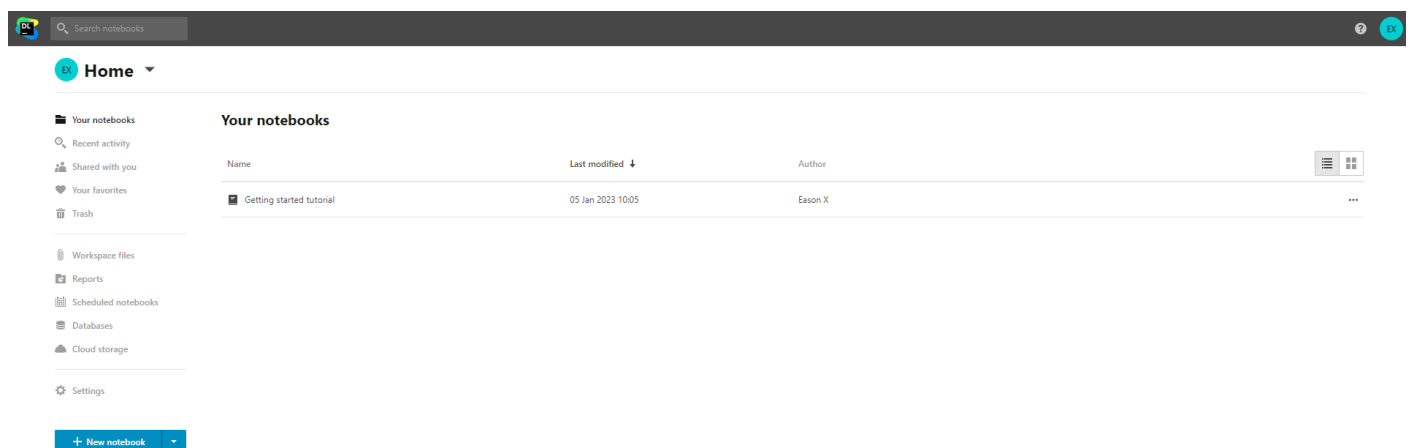

## How to Open JetBrains Datalore for Python Basics

### Step 1. Registration

1. Access and sign in JetBrains Datalore Platform using the following link: [datalore.jetbrains.com](https://datalore.jetbrains.com)

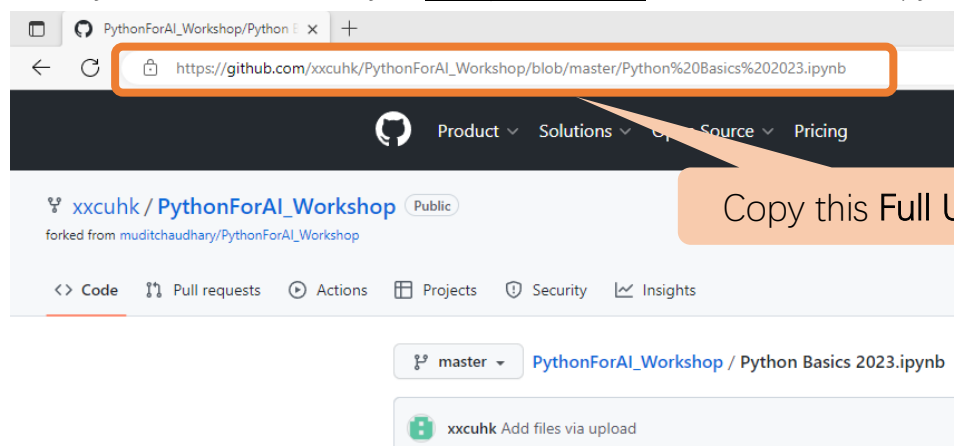

2. Once logged in, the interface will be displayed as shown below:

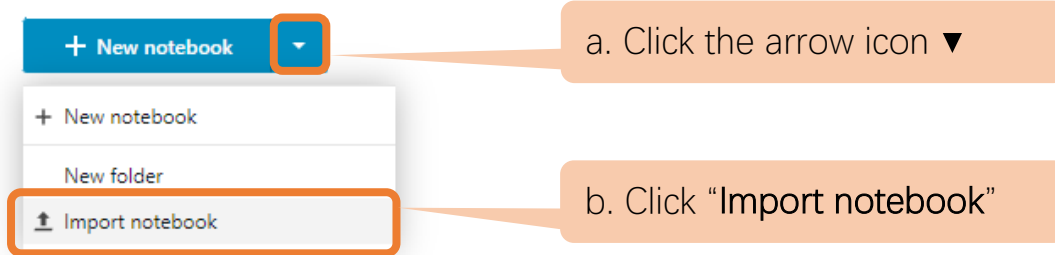

### Step 2. Import notebook

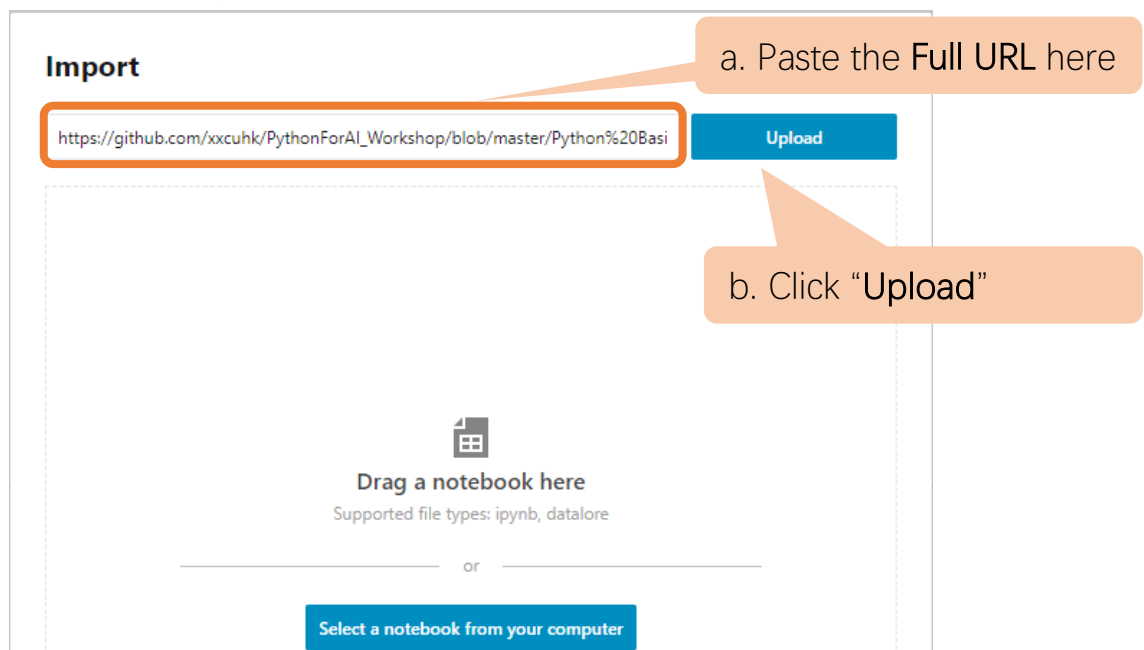

1. Open a new tab in your browser and key in [cutt.ly/o3kXZDQ](https://cutt.ly/o3kXZDQ) in the URL bar. Copy the full URL.

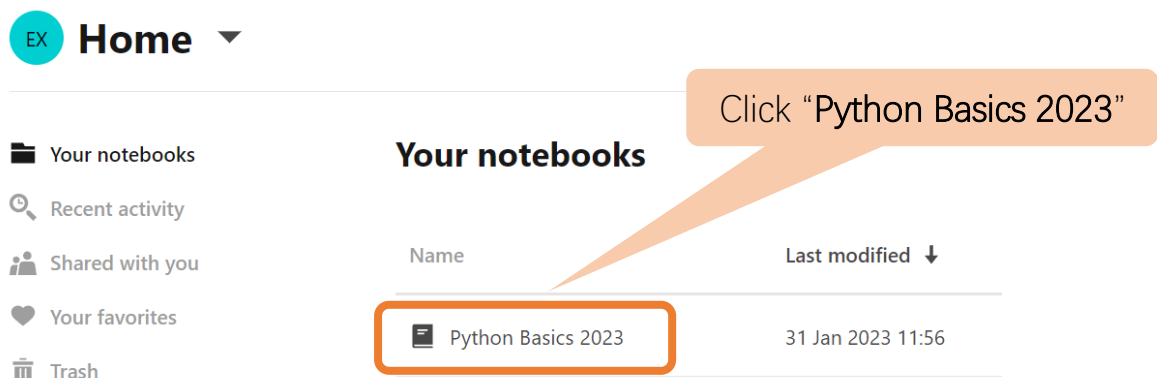

2. Click the arrow ▼ beside 'New notebook' and click 'Import notebook'.

3. Paste the full URL and click "Upload".

4. Once uploaded, click "Python Basis 2023".

5. Please follow the instruction and complete the tasks.

## 1.1 Hello World

Our first coding exercise. We print "Hello World" on our computer screen.

In the coding cell below type `print("Hello World")` and press the **Run** button

```
# Write code below  
print("Hello World")
```

Please follow the given instructions
